

# **Reactive Statistical Mapping: Towards the Sketching of Performative Control with Data**

eINTERFACE 2013 Summer Workshop on Multimodal Interfaces

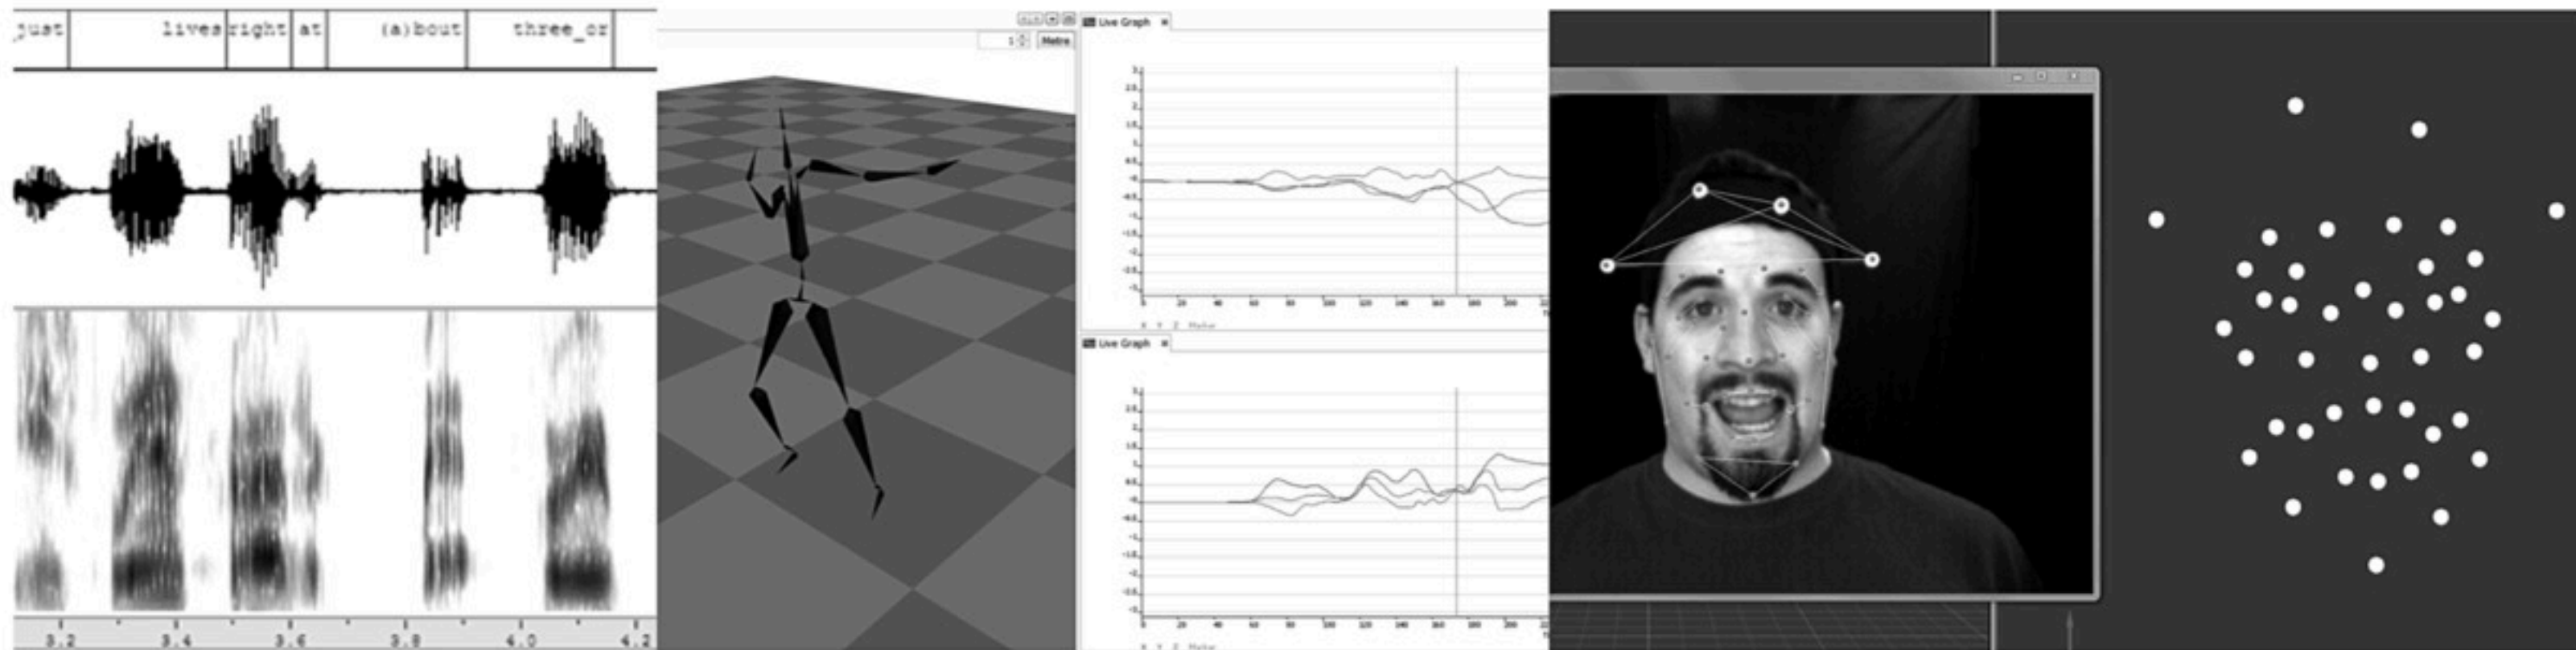

N. d'Alessandro, M. Astrinaki, O. Babacan, A. Barbulescu, H. Cakmak, R. Dall, Q. Hu, T. Hueber, V. Huguenin, S. Kalayci, A. Moinet, V. Parfait, T. Ravet, J. Tilmanne

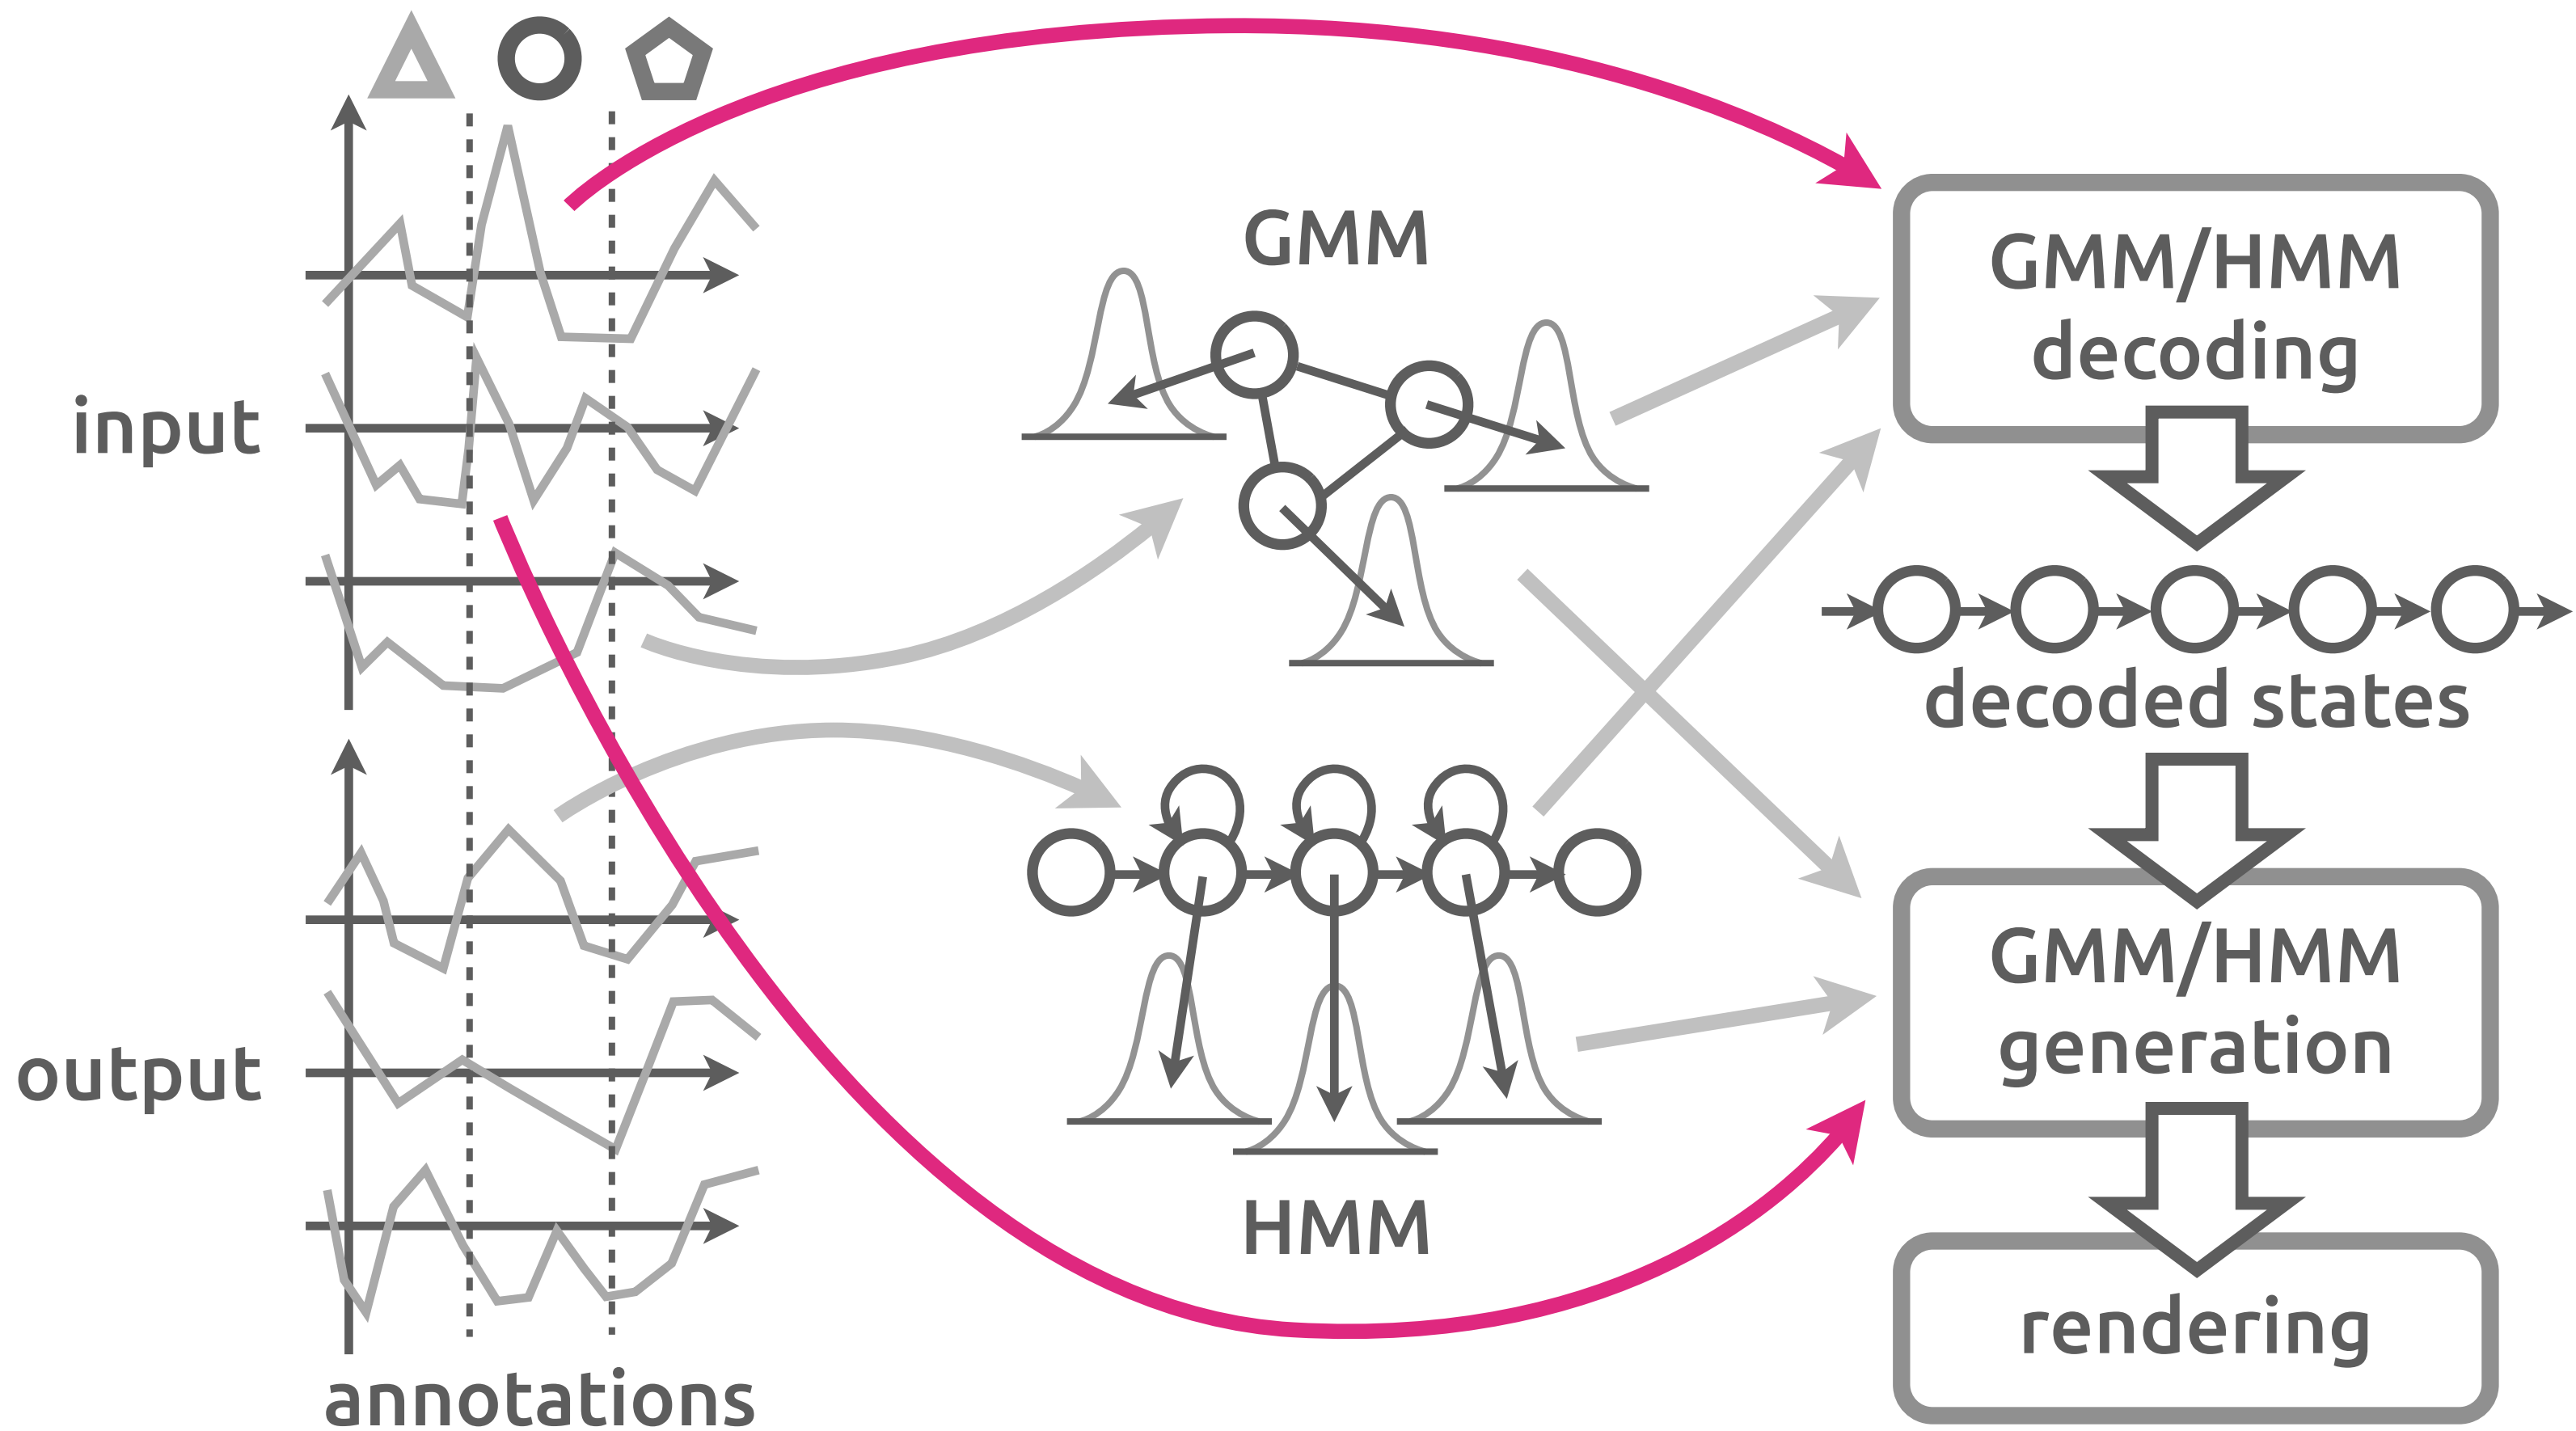

what we do in this project?  
GMM/HMM-based techniques used in  
speech synthesis as a statistical mapping  
layer in multimodal **performative** systems

**realtime and reactive  
decoding state sequence and  
generating trajectories on an  
acceptable sliding window**

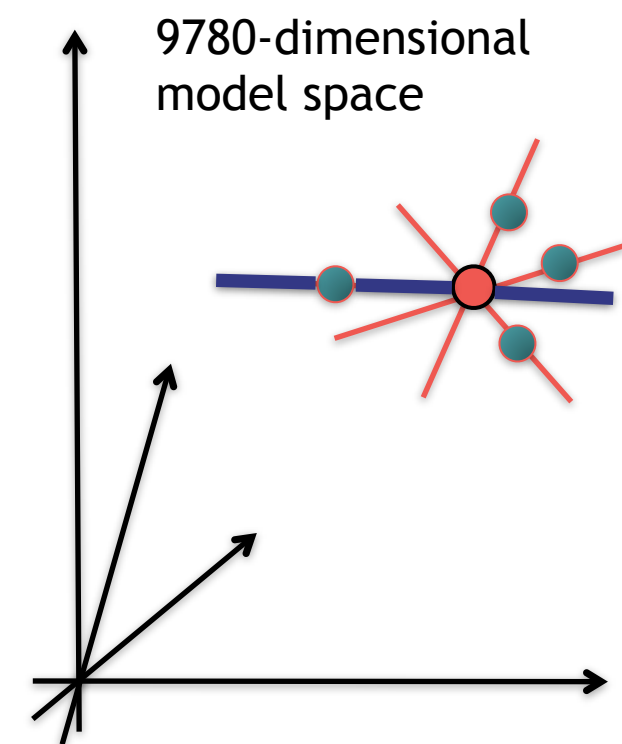

Frame Rate: 67.414864

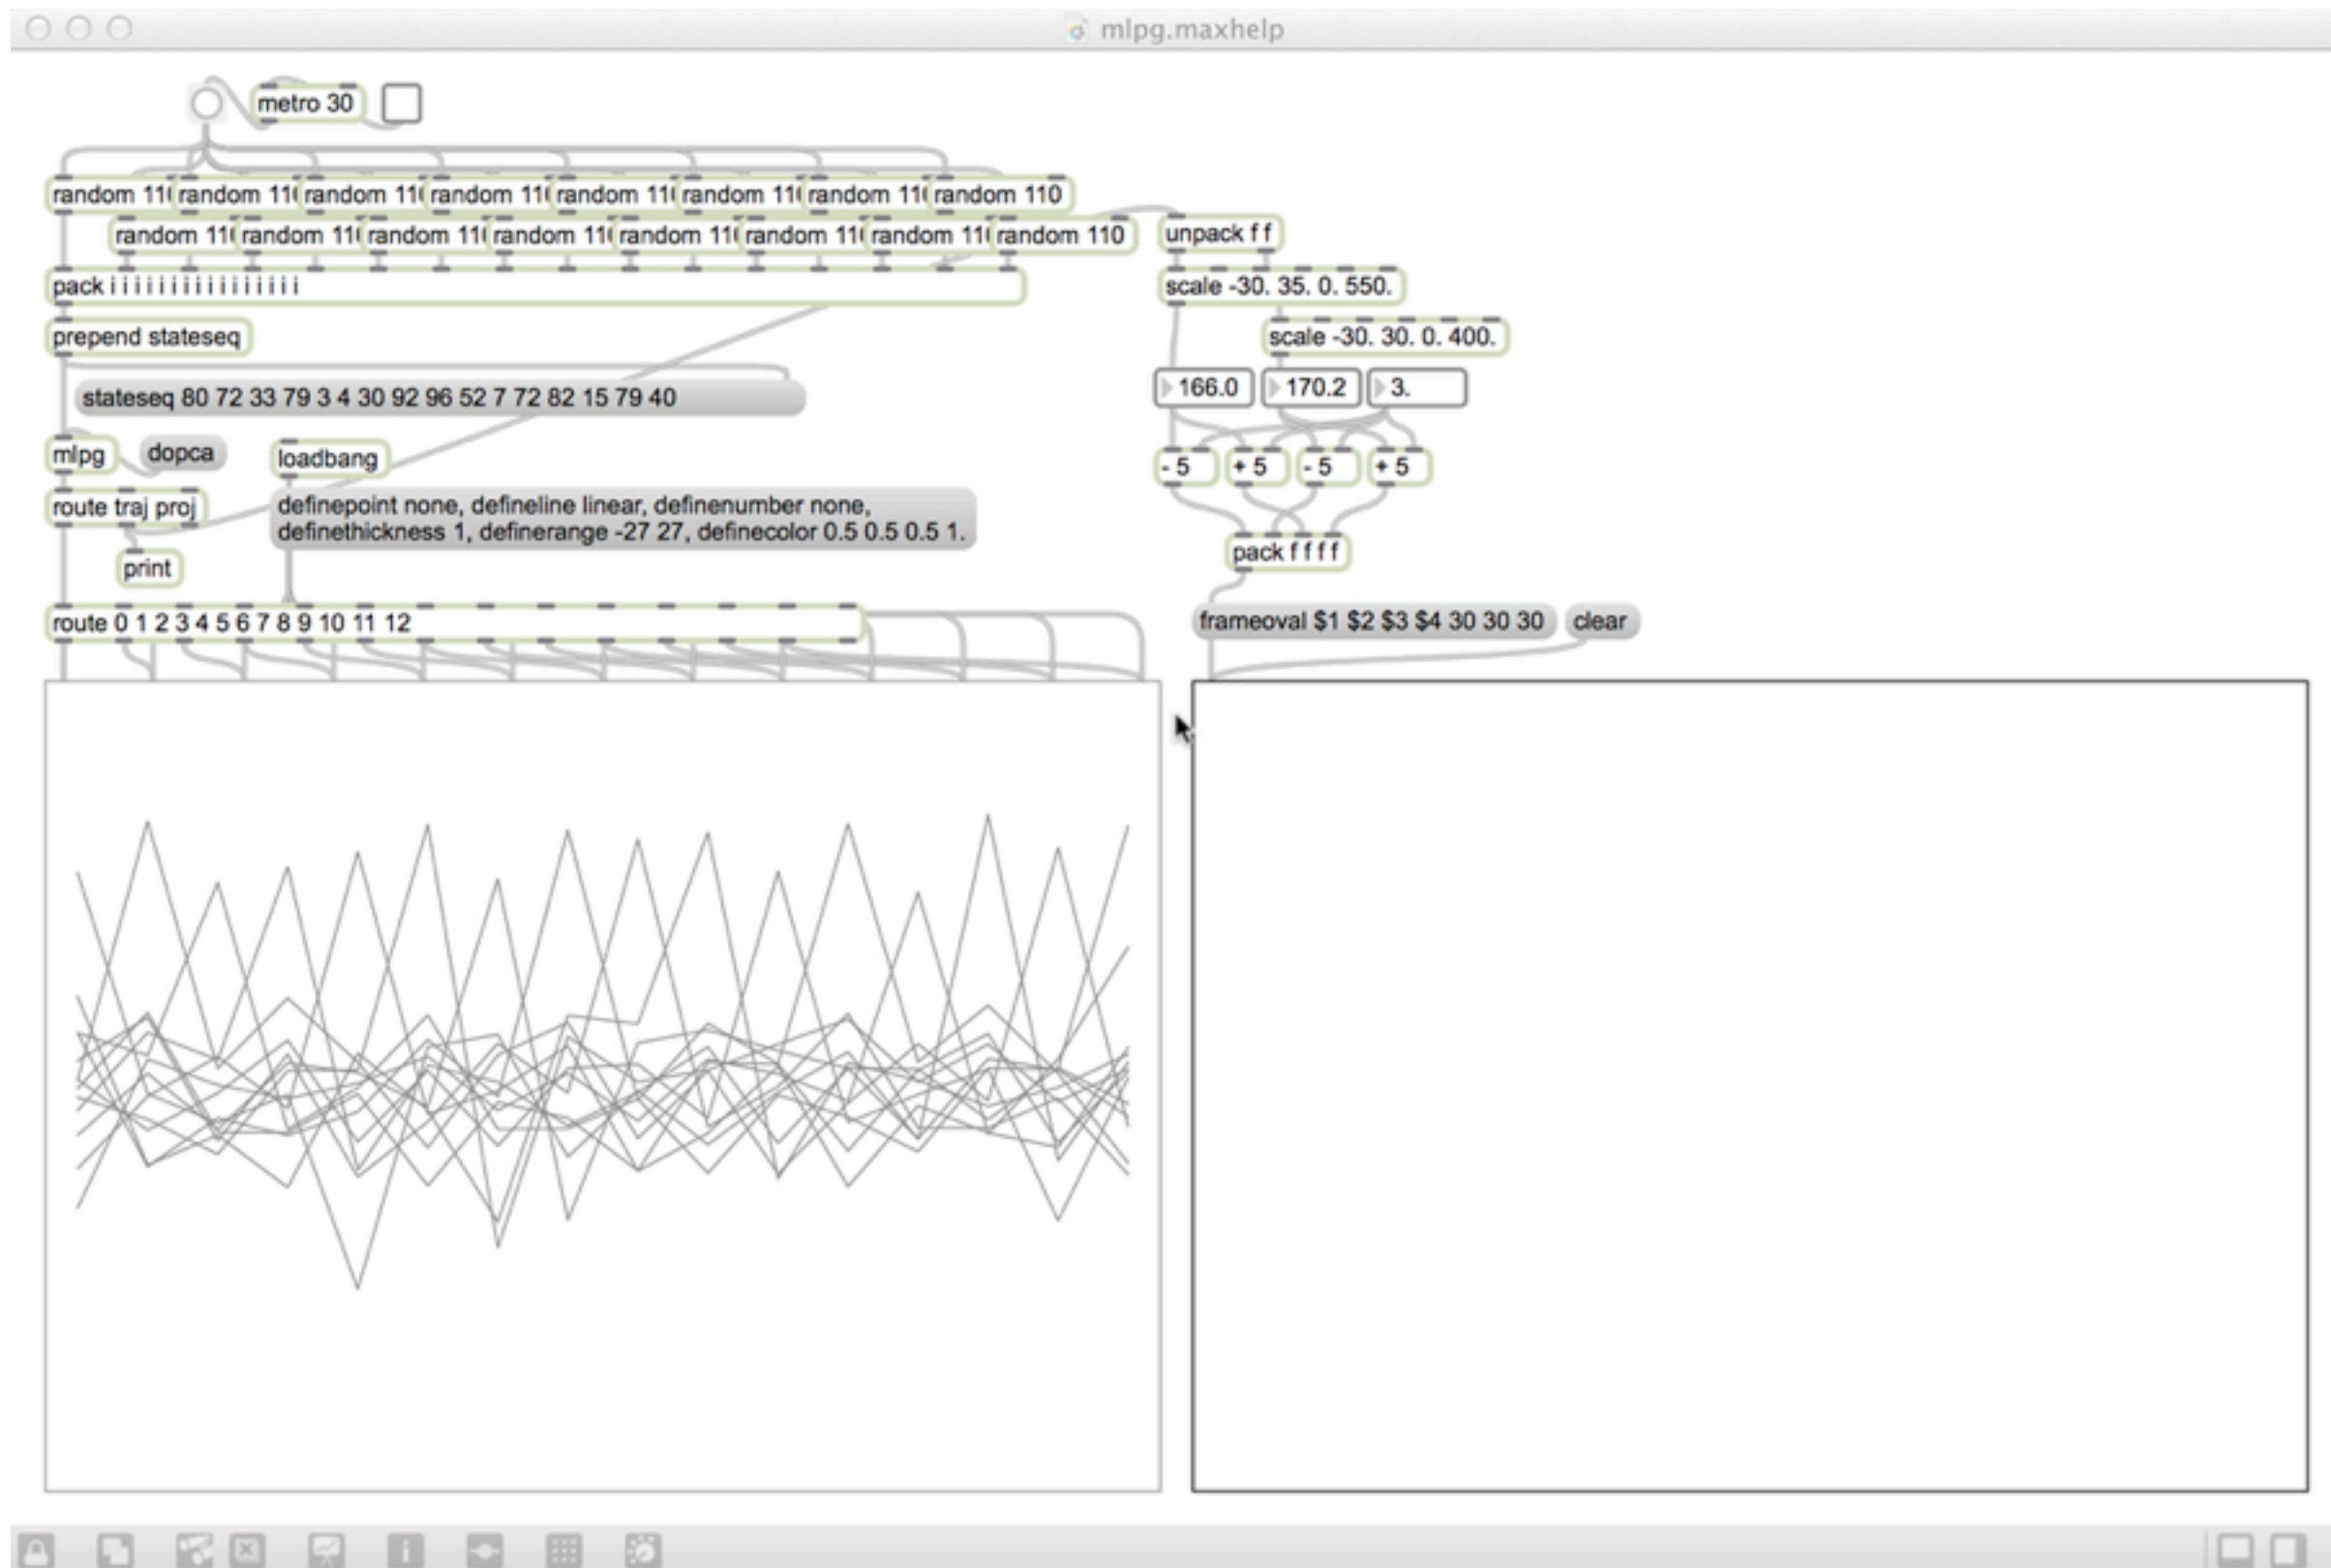

ed on the mage tool kit the ps speak has been slowed to allow me to ty

```

- realtime decoding of state sequences
- prototyping environment for the sliding state window and testing of various timing ideas
- inputs in HMM generation: investigating new coupling techniques, regression or FC matrix
- recording singing voice samples and explore GMM/HMM based modeling of voice quality
