

Experimental user interfaces

Tapio Takala Ph.D.

Department of Media Technology, Aalto School of Science, Finland

The talk will present a range of research and student projects developing human-computer interfaces in various modalities and application areas, such as games, musical performances, and 3D design environments. Besides technological solutions, human and applications specific issues will be discussed, including collaborative group work. Special emphasis will be given to generalized user interface models and mapping between abstract and physical interaction devices.
